XpressBiller

Detect, Assign, Correct and Minimize Errors

Manage your own custom rules and edits in real-time

Our industry leading rules engine allows you to easily configure these items without any development work:

- **AutoCorrect**
- **Convert**
- **Edit**
- **Medical Necessity**
- **Advanced Workflow**
- **Suppress Edit**
- **Error Category Management**
- **Payer Rejects**
- **COB Processing**

XpressBiller is a powerful rules and edit engine, designed to allow clients to build custom converts and edits they are unable to make in their HIS system to help detect, assign, correct and minimize errors in real-time before the claim is released to the payer.

A key component of Quadax's Claim Management System, XpressBiller provides accurate, standard edits, plus edits custom to your organization. Quickly customize data conversions to overcome shortcomings in your claim generation routines, and enable auto-correct rules and advanced workflows to give you the greatest precision and control in your claims management.

Custom Billing Edits

XpressBiller allows for the creation of user-defined rules, including: provider-specific edits, auto-correct or suppress edits, and custom converts. Easily stop a claim, change or remove field data, auto correct to modify data based on a particular error, or suppress an error on a claim. Built with flexibility in mind, XpressBiller meets the proprietary needs of all business models.

Full Transparency and Accountability

Our comprehensive, up-to-date library of claim processing rules and edits are continuously maintained (bi-weekly and updated by our EDG – Edits & Documentation Group). They are a team of experts, knowledgeable in both billing and ANSI claim requirements, and reference nationally recognized sources, including AHA, AMA, CPT, Medicare, Medicaid, and more.
