

Predictive Intelligence

Empower business decisions with data-driven predictions

- **Predict denials and your expected payment**
- **Use the predicted outcomes to take corrective actions and 'avoid potential denials'**
- **Prioritize claim workflows to maximize cash flow**
- **Enable cash flow forecasting**

The goal for every claim going out the door is to avoid a denial and get paid as quickly as possible. As part of a denial avoidance strategy, you've likely built processes along with claims and denial follow up workflows.

Predictive Intelligence by Quadax is a cutting-edge machine learning technology that uses custom predictive models to transform our traditional denial management strategy to that of denial *avoidance*. Quadax processes billions of dollars of claims and remits on behalf of our clients each year. By combining that information with machine learning tools, we have built the industry's most powerful predictive model for revenue cycle optimization. Prediction models are trained using your most recent historical claim and remittance data so they are making predictions based on your unique business.

POWER UP YOUR DENIAL AVOIDANCE STRATEGY

AVOID DENIALS

Whether integrated within Quadax's Claim Management solution or embedded as an API into your chosen workflow solution, it is easy to predict denial and payment status based on the current claim work performed - before you hit "release." Quickly view the following:

- Likelihood of a claim denial at the claim and service line levels
- Reason for denial or partial payment at the service line level using 835 reason and remark codes that are familiar to your staff
- Predicted days to payment
- Predicted payment amount

Re-validate changes to the claim in real-time, to see if your actions change the predicted outcome.

PRIORITIZE & MANAGE CLAIM WORK

With Predictive Intelligence by Quadax, you have visibility into the cause of the potential denial so you and your staff can make necessary adjustments to your organization's billing processes and workflows to optimize your revenue cycle strategy. Predicted values can be displayed in custom order based on customer preference. Maximize your cash flow by ensuring claims with the highest opportunity for improvement are processed first.

PRODUCE MORE FORWARD-LOOKING CASH FLOW PROJECTIONS AND ADJUST TO CHANGING FACTORS

ENABLE CASH FLOW FORECASTING

With a claim prediction that includes the days to pay and the expected reimbursement amounts for your claims, Quadax provides a forward looking cash flow projection for your business. In these trying times, knowing when your cash is coming is a valuable insight for running your business!

Take action on your cash flow projections - optimize cash flow projections by scoring and prioritizing claims in Xpeditor so that high value claims (likely to pay, high dollar value) are always worked first to maximize your cash flow.

AUTOMATICALLY ADAPT TO EXTERNAL CHANGES

Legislative, payer specific and other market factors can affect core billing processes. By leveraging cutting-edge machine learning tools, Predictive Intelligence by Quadax will continuously take these factors into account, fine tuning predictions as new information is received to ensure the business can respond and react in a timely fashion.
